PREFACE

This is the Fifth volume of a biennial series, LEADERS IN AMERICAN SCIENCE. The purpose of this series is to keep-up-to-date a carefully selected list of scientists in the United States and Canada, in the form of biographical sketches, photographs, and short references.

We have endeavored to make this list selective and, at the same time, to some degree, inclusive. For reasons stated below, we do not claim to fully cover the field of Science in the United States. Some people we wanted simply would not reply to our letters. Government scientists are exceedingly hard to reach.

Our help in compiling this volume came from varied sources. First, we secured thousands of recommendations from those included in previous volumes. Second, we asked the president of each accredited college and university in the United States and Canada to recommend outstanding teachers and research workers. Third, we had extended correspondence with members of the National Academy of Science and with scientific associations regarding recommendations. Fourth, we gave some attention to science news, both in the daily press and in scientific professional journals.

Unfortunately, just getting recommendations of competent people was not enough. The task of getting biographical data from the desired people was exceedingly difficult. Scientists are very busy people. As a class, they are not publicity conscious and are reluctant to give out information.

Our files are bulging with biographical data of LEADERS IN AMERICAN SCIENCE. Obviously, we could not compile and print all of the thousands of sketches which were submitted. In many cases, where it was impossible to use the sketch, we used a short reference. In instances where the person is eminent and we were unable to secure biographical data, a one-line reference is used.

One very interesting feature of Volume V is the inclusion of the biographical sketch and picture of Gillis Patrick Flanagan of Bellaire, Texas. Mr. Flanagan is only eighteen years old and will graduate from high school next June. At this young age he has been nationally acclaimed as an inventor and scientific genius. We are going to follow his career with much interest.

Personally, we feel that the pictures add a great deal to the volume. In the series WHO'S WHO IN AMERICAN EDUCATION, we now have the photographs of over 40,000 educators. It is not a sign of vanity to use a photograph along with a biographical sketch. The respected *Who's Who in Canada* has used photographs for years. Newspapers and magazines purchase LEADERS IN AMERICAN SCIENCE in order to have a ready source of pictures.

LEADERS IN AMERICAN SCIENCE is being published in December of 1962. The data included is reasonably up-to-date through September, 1962. We shall welcome letters, recommendations, and all constructive criticisms. We especially want help on the problem of listing the thousands of outstanding scientists employed in industry and governmental services.

Our thanks go to the hundreds of men and women who have been very helpful to us with recommendations and suggestions. Our associate editor, Mrs. Margie M. McDuff is due a great deal of credit for the work on this volume. She has six editorial assistants who also are deserving of credit: Mrs. Edna Bryant, Mrs. Frances Garrett, Miss Beverly Shoemake, Miss Mary Miller, Mrs. Betty Sadovsky and Mrs. Mary Vaughan.
